NEW platform: three ways to launch

Customers, technicians, vendors and admins can use NEW as a website, as phone apps, or as a mix. This page compares the three, what works in each, and what each costs to build.

1. Website only

No phone apps

৳3,20,000 to 3,70,000

- Customer, technician, vendor and admin all use websites
- No app store accounts needed
- Customers can find the shop on Google
- Technician live location and job alerts are limited (see the table below)

Recommended

2. Website and technician app

Customer, vendor, admin on the web. Technician on Android.

৳3,30,000 to 3,70,000

- Customer shop is a website that Google can find
- Technician app keeps location on and rings for new jobs, even with the screen off
- Vendor and admin work in a browser
- Needs one Google Play account ($25, once)

3. Full phone apps

Android first, then iPhone, plus admin website

৳4,00,000 to 4,40,000

- Customer, technician, vendor and admin mobile apps
- Customer website included
- Best phone experience for everyone
- Google Play ($25, once) and Apple ($99 a year) accounts

Amounts are development only, paid once, excluding VAT and tax. Server, domain, SMS and payment fees are separate and the same in all three (see the cost estimate document). The exact amount is fixed in the agreement.

What works where

WHAT YOU NEED	WEBSITE ONLY	WEBSITE AND TECHNICIAN APP	FULL PHONE APPS
Technician live location on the customer's map	Stops when the phone locks or the page is closed	Works in the background	Works in the background
New job alert to the technician (60 seconds to accept)	Web push on Android. Limited on iPhone. Needs an SMS or call as backup	Reliable alert	Reliable alert
SMS code fills in automatically	Android Chrome and iPhone keyboard suggestion	Yes	Yes
Photos, selfie, identity check	Yes	Yes	Yes
Online payment (bKash, Nagad, cards, bank)	Yes	Yes	Yes
Shop pages found on Google	Yes	Yes	Yes (customer website)
Customers install from Google Play or App Store	No, "add to home screen" only	Technician only	Yes

WHAT YOU NEED	WEBSITE ONLY	WEBSITE AND TECHNICIAN APP	FULL PHONE APPS
Updates reach everyone	**At once**	**Website at once, technician app after store review**	**After store review**
Smooth on low-end phones	**Good, a little heavier than an app**	**Good**	**Best**

Why the technician needs an app. The business depends on the technician being reached in 60 seconds and customers seeing the technician on the way. A website cannot do either when the phone is locked in the technician's pocket. Everything else works well on the web.

Our recommendation

Option 2: website for customers, vendors and admin, Android app for technicians.

- It costs about the same as website only, because the technician screens must be built either way.
- Customers get a shop Google can find, with no app to install.
- Technicians get the alerts and live location that the service depends on.
- iPhone apps for customers or vendors can be added later if you need them, at a price agreed then.

Costs that are the same in all three

ITEM	COST
Server, backup and domain	Fixed monthly and yearly cost, see the cost estimate
SMS codes	About ৳0.31 to 0.64 per SMS
Payment fees	A share of each online payment, taken from the payment
Google Play account (options 2 and 3)	$25, once
Apple account (option 3, iPhone)	$99 a year

How to choose

- **Do customers search on Google before they buy?** If yes, the customer website matters. All three include it.
- **Does a missed job alert cost you money?** If yes, the technician needs the app. Choose option 2 or 3.
- **Do you need apps in the stores for trust or marketing?** If yes, choose option 3.

These are estimates for discussion, not an offer. Provider prices and rates change. VAT and tax are extra. The agreed price and scope are fixed in the signed agreement.
